Miniature Air-piston Vibrators Pack a Punch!

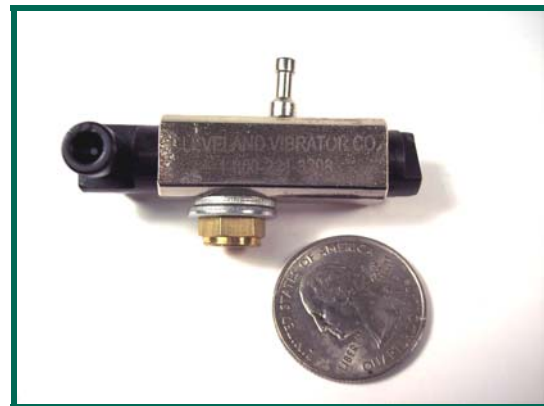

Model VM-25

Cleveland Vibrator's VM-25's ultra simple design — only one moving part (WS-2 Super Grey coated piston), size and variable frequency make it excellent for automated parts track vibration. Also, it can be used to promote the free flow of materials from small, thin-skinned (minimum 28 gauge) bins and hoppers to 2 cubic feet (57L) capacity. Actually, the applications are limitless, confined only by imagination.

They can be supplied with a muffler to prevent contamination and reduce noise level. An air-cushioned version, VMAC-25, will further reduce noise level, with a with a 30% reduced force output.

This perky little unit produces 16,000 vibrations per minute while only consuming 2.0 SCFM (57 lpm) of compressed air at 80 psig (5.4 bar). Normal force output is 15 lbs.
